

4L60, 4L60-E, 4L65-E, 4L70-E

Features & Benefits

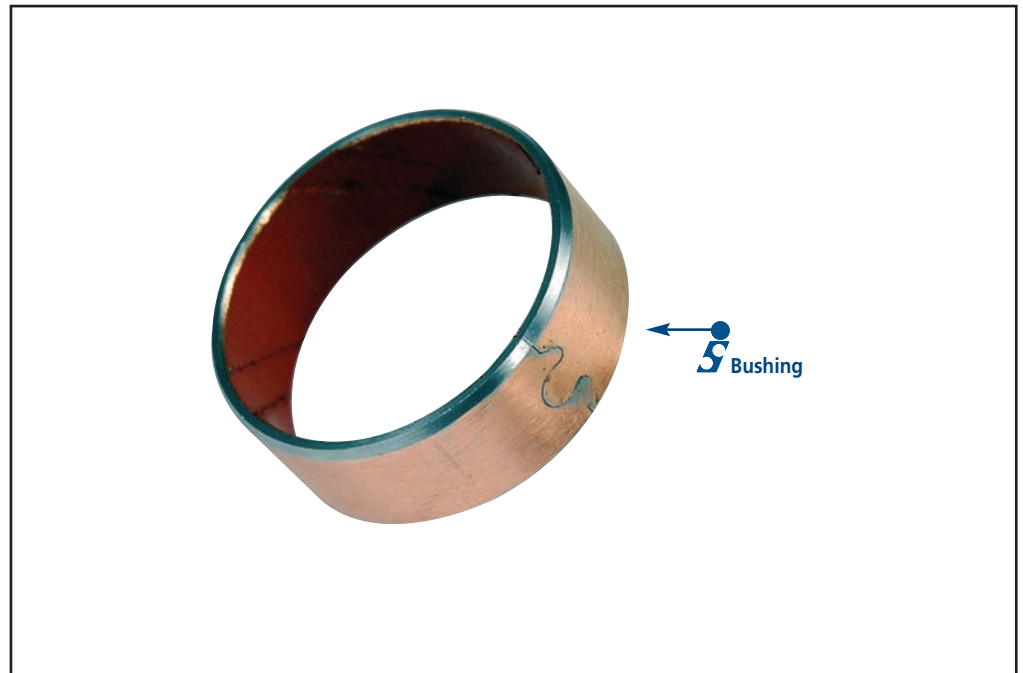

- No machining required
- Extremely wear resistant Teflon[®] lining
- Provides a closely toleranced I.D. which is typically found in machined-in-place bushings
- Wider than OEM bushings

Bushing, Rear Stator Support, Teflon[®] Lined

Part No.

77002BT-01

1 Bushing

Part Summary:

The original 4L60 & 4L60-E/65-E/70-E rear stator bushing comes in narrow and wide versions in both common bronze and harder aluminum type materials. All versions commonly fail or wear out prematurely. Available aftermarket replacements typically have a poor quality fit and are also known to wear. For maximum durability Sonnax now offers a better fitting and extremely wear resistant Teflon[®] (PTFE) lined replacement bushing to stop future wear in its tracks. The Sonnax KRYPTONITE™ rear stator bushing is the best option for supporting the 20 pound input housing and for improving the reliability of these common units. This bushing is a direct replacement and does not require any machining or modification.
